## GLOBAL INNOVATION BASE

### Innovation and quality driven

To be the first with new ideas: focusing on innovation and quality is a key company mission. Altuglas International pools worldwide talents in acrylics technology, optics and colorimetrics to put you one step ahead. Altuglas International engineers and developers are constantly looking out for promising technologies that will bring you a decisive competitive advantage.

### At the source of new designs

Proactivity is the basis of creativity. Altuglas International has made anticipation a business practice. This means being able to imagine what the customer really needs and being the first to bring it to the market. With the proper technology and relevant creativity, any product can become a winner.

### Serving global companies in the four corners of the world

A leader must be present on all fronts. Altuglas International is already the global supplier to major companies in the Americas, Europe and Asia. Economies of scale, diversified technological experience and multi-talented teams boost the competitiveness of our customers.

#### Faster to market, worldwide

Wherever you are, Altuglas International is nearby. Transnational teams optimize performance and sharply reduce launch time. Your next product can be invented in the USA, developed in Europe and assembled in Asia, or the other way around. Focused on customer satisfaction, ahead of market drivers and trends, Altuglas International speeds up your innovation worldwide.

#### Going for growth in Asia

Already a leading global supplier in Asia, Altuglas International is intensifying its presence there. Close to its clients, it provides industrial expertise, innovation and commercial power to the fastest growing industries: automotive, transportation, building, P.O.P. displays, signage, decoration for shopping centers, consumer goods and electronics. Altuglas International is now a trusted partner in the world's most dynamic markets.

## SHARP SOLUTIONS, BRILLIANT RESULTS

### At the source of innovation

As a market leader, Altuglas International offers the widest expertise across all acrylic technologies. Drawing on a worldwide network of research centers, Altuglas International is constantly extending the possibilities of PMMA materials. Always hunting for original solutions, Altuglas International comes up with ever more innovative acrylics, allowing new designs, new visual effects and functional capabilities.

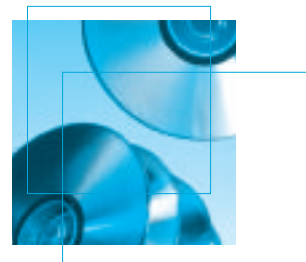

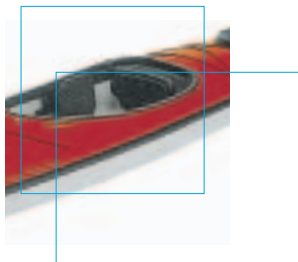

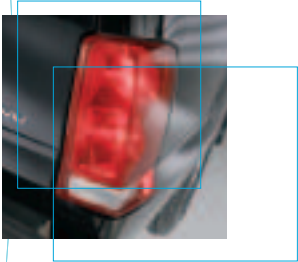

For each industry, dedicated teams devise, develop and deliver advanced specific solutions: the right acrylic with the right grade and the right tool. Altuglas International engineers are part of the development process in the

automotive, cosmetic, lighting and optical industries. The aim of Altuglas International is to go beyond the ordinary and come up with new solutions for the most extreme product design demands.

Cross-fertilization is the norm. In optics, color diffusion, mechanical, impact, heat resistance and surface treatments, Altuglas International engineers benefit from the world's leading knowledge base. To accelerate the pace of new products, they are connected by a worldwide information network. Transnational teams ensure optimal coordination and speed of development.

### Extend your vision

To develop the best car lamps, General Motors Corp. turned to Altuglas International, the leading supplier of automotive acrylics. Altuglas International developed tail lenses of superior optical performance and durability from Plexiglas® impact acrylic resin, involving coordination with a number of Tier 1 and other suppliers. Designed in the USA, molded in Mexico, then shipped back and assembled into the vehicles, these are high-quality parts from a worldwide manufacturer.

### Catch the eye

Estée Lauder wanted a brilliant eyeshadow container. Altuglas International looked into the challenge and proposed Altuglas® HFI resins for exceptional beauty and clarity. The crystalline "ice cube" soon became a must among fashion-conscious consumers worldwide: proof that squaring the circle can be achieved by combining technology and creativity.

### Protect the base

Watercraft, recreational vehicles, lawn tractors, patios, decks and fences: Solarkote® acrylic capstocks provide an exceptional quality surface and substrate protection from UV degradation. To enhance and protect product beauty, top-of-the-market brands choose Solarkote® acrylic capstocks.

### Enjoy DVD

With excellent signal quality and reduced cycle times, VOD® resins have become the reference in low birefringence. They are part of the new video revolution, becoming the world acrylic standard for manufacturers of DVD 18. VOD® resin is also being considered for shorter wavelength blue and UV light laser systems.
